Lencore's Spectra i.Net® System Unveils *its Jordna Hub*

(WOODBURY, NY) - Lencore Acoustics Corp., a manufacturer of commercial sound masking systems, introduces the Jordna Hub to its line of Spectra i.Net® Networked Sound Masking technology products.

The Jordna Hub enables very large facilities and multiple campus buildings to be tied together to a single central control panel in order to provide complete zoning and adjustment control for all facilities from one location.

The hub acts as a sophisticated hub that can provide connections for up to four additional campus buildings or facilities or can be connected to additional Jordna Hubs to provide added building connectivity.

Access to the system controls takes place at the Spectra i.Net® head end equipment where an open platform web device houses the Spectra i.Net® Sound Manager program. Using password protected access, the Sound Manager provides complete system tuning and zoning capabilities for all buildings that are connected to the Jordna Hub. The networked capabilities of the system

enable it to address any facility connected through the networked system and hub, on site, off site, and remotely for 24/7 access.

The Jordna Hub provides an input that connects to one of the Spectra i.Net® Operating Platforms or OP's and then has four outputs that provide the ability for the Hub to branch to various other OP locations in separate buildings or facilities. Multiple Hubs can be connected to provide clients with almost infinite scalability and capability to meet future growth.

“We consistently listen to our clients,” states Jonathan Leonard, Vice President of Lencore, “and often their needs, enable us to create the most innovative products. The Jordna Hub was created as a way to tie multiple facilities together and still maintain the one central control panel capabilities. The byproduct of its ingenuity includes the ability to reduce cable usage and installation costs for our clients while making for a greener installation of product.”
Contact Lencore at info@lencore.com to set up a demonstration of the Spectra i.Net® System and for more information about its new Jordna Hub.

* * * * *

Lencore manufactures masking and paging systems including networked systems, in-plenum systems, direct fired systems, networked direct fired systems, centralized, decentralized, and remote sound masking systems. Lencore systems are UL listed for use in air-handling spaces and have been independently tested to meet ASTM standards for speech privacy. For more information on Lencore's revolutionary networked sound masking system, Spectra i.Net®, please contact Jodi Jacobs at info@lencore.com.
