i.Net

IR WALL CONTROLLER

MODEL G42

FUNCTION

Each OP (sound source) of the i.Net System has an integrated IR Port. This port can be connected to the IR Wall Controller (Model #G42) to make volume and contour control adjustments for masking, paging and music by pointing a remote control at the IR Wall Controller.

This type of application can be typically used for various spaces such as private offices, conference rooms, healthcare facilities, and areas where remote control adjustments are required.
