

MASS NOTIFICATION, AUDIO DISTRIBUTION & SOUND MASKING

FIELD PoP™

SYSTEM
MANAGEMENT
MADE SIMPLE

Field PoP™ is a cloud based interface for the Lencore n.FORM Mass Notification System that meets the UL 2572 Standard with interactive global monitoring and activation. Field PoP allows the user to quickly and easily access, adjust, or run diagnostics for the entire system. Reporting, monitoring and patching can also be done on the system, no matter where it is located in the world.

FIELD PoP™ GETS WHERE YOU NEED TO BE

Facility managers, installers and support professionals are able to remotely interact with assigned systems through the n.FORM™ Field PoP gateway. The cloud-based interface allows users to review system performance, run diagnostics, make configuration changes, perform preventative maintenance upgrades, and send critical security messages – all remotely.

Field PoP saves time and money by providing system knowledge before trucks roll. Remote management allows systematic or spot changes to be made to the mass notification, sound masking, paging, or audio distribution systems.

 **LENCORE**
SAFE. AND SOUND.

FIELD PoP™

Field PoP is a single point of access for all facilities. By viewing a map of locations, the user is able to quickly identify a facility and click on its "pin" to gain system access and control.

GLOBAL MANAGEMENT WHEREVER YOU ARE

Complete administration access with proper security permissions

Secure tunnel with authenticated end points, & no firewall dependencies

Synchronized cloud platform to provide field product data

Worldwide visibility for registered systems on one map

Enterprise ready

Historical & current data all available

Cloud-based alert & notification services

Remote software upgrades - minimizing unnecessary field visits

Manage all registered devices from the web

Local IoT gateways with remote access
